DETAILED ACTION

Drawings

1. Figure 2 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Specification

2. The disclosure is objected to because of the following informalities:

On page 7 of the specification (line 9), it appears that the term "limier" should read as --limiter--.

Appropriate correction is required.

Claim Objections

3. Claim 4 is objected to because of the following informalities:

On line 4, it appears that the phrase "the a portion" should read as --a portion— to improve the grammatical form.

Appropriate correction is required.

Claim Rejections - 35 USC § 103

Page 3

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 5. Claims 1 and 3 are rejected under 35 U.S.C. 103(a) as being unpatentable over Applicant's admitted prior art Fig. 2 (AAPA) in view of Toritsuka (JP05067934).

AAPA Fig. 2 teaches a pin diode limiter circuit (Claim 3) as described in the background of the invention. However, AAPA does not teach that the limiter element is connected through a terminator (Claim 1).

Toritsuka (Fig. 4) provides the exemplary teaching of limiters (F2 and F4) having the configuration of a pin diode connected through a terminator line section (e.g. L20), and having an inductive path (L30, i.e. it functions as a DC return path in the same manner as the present invention since it is in the same configuration as the present invention) in parallel to the terminator and pin diode D1.

It would have been considered obvious to one of ordinary skill in the art to have substituted pin diode limiter circuits F2 and F4 such as taught by Toritsuka in place of the AAPA limiter circuits, because it would have been considered a mere substitution of well-known art-recognized functionally equivalent/alternative

Art Unit: 2817

means for providing pin diode limiting in pulse radar applications such as taught by both Toritsuka and AAPA (see Toritsuka machine translation section 001).

Allowable Subject Matter

6. Claims 2 and 4 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Heston et al. teaches a matched variable attenuation limiter.

Lampel teaches an amplitude filter.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Stephen E. Jones whose telephone number is 571-272-1762. The examiner can normally be reached on Monday through Friday from 8 AM to 4 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Robert J. Pascal can be reached on 571-272-1769. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
